Median of per-arm medians (band = IQR over a line's arms)
median Δp(trait) / receiver prior
student step
Same lines, each normalised to its own peak (peak = 1)
median Δp(trait) / receiver prior ÷ line's own peak
student step
line (● interior peak)
Pythia same-model (23 arms)
diff init, diff data order (48 arms)
same init, diff data order (12 arms)
diff init, same data order (6 arms)
Pythia-160M re-pretrain (6 arms)
